

Beetle Mortality (2006 – 2016) and Healthy Forests Restoration Act (HFRA)

- Roughly 89% of forested acres on the Snowy Range and 79% of forested acres on the Sierra Madre have been impacted by beetles and other tree pathogens (2016 data).
- The LaVA analysis area has been designated as an insect and disease area under the HFRA due to the extent of tree mortality and other forest health issues.
- The HFRA allows for expedited environmental analysis, a narrower range of alternatives, and shortened administrative review procedures; it does not shortcut public involvement and other collaborative requirements.

The Forest Service uses the most current and complete data it has available. GIS data and product accuracy may vary. They may be: developed from sources of differing accuracy, accurate only at certain scales, based on modeling or interpretation, incomplete while being created or revised, have represented features not in accurate geographic locations, etc. The Forest Service makes no expressed or implied warranty, including warranty of merchantability and fitness, with respect to the character, function, or capabilities of the data or their appropriateness for any user's purposes. The Forest Service reserves the right to correct, update, modify, or replace this geospatial information based on new inventories, new or revised information, and if necessary in conjunction with other federal, state or local public agencies or the public in general as required by policy or regulation. Previous recipients of the products may not be notified unless required by policy or regulation. For more information, contact the Medicine Bow - Routt National Forests and Thunder Basin National Grassland Supervisor's Office (2468 Jackson Street, Laramie, WY 82070, 307-745-2300).
